

Microsoft Surface

A range of devices designed for your business to do great things, in exciting new ways.

Microsoft's software has been developed so that businesses can achieve great things, but without the right hardware you'll struggle to get the most from your IT investment. At Centrality, we're experts at matching up the right technology to give your business the tools it needs.

The Microsoft Surface range has been very carefully crafted to help your business reach the limits of what can be achieved with modern enterprise software. Built with business users in mind, each model has enough power to handle any task and effortlessly adjust to the way your business works, connecting seamlessly to other devices.

Every Surface device is designed to get more from the apps your business uses today and take advantage of tomorrow's innovations, with your organisation kept safe by security features trusted by the world's biggest organisations.

Not all Surface models are the same though and every business will need a different mix of devices, configured differently, with a different mix of software installed. This is where Centrality can help.

Surface as a Service

Modern enterprise IT develops at such a speed that it can be difficult to keep up with all the latest technology without committing a huge chunk of your budget to buying new equipment. Surface as a Service allows your users to get hold of next-generation Surface devices, familiar Microsoft software and market-leading cloud capabilities - without spending a penny upfront.

And as with any of our other services, we use our expertise and experience to collaborate with you to develop the perfect combination of Microsoft technology and support from Centrality for your business, in exchange for one simple monthly bill.

That's everything you need for a workplace that benefits from 21st century productivity, with the flexibility to easily scale the number of devices you're using, when needed. And with a choice of the duration, your employees can benefit from the perk of working with the newest devices available.

Microsoft Surface Products

Surface Pro. The new face of enterprise mobility

If your employees are always on-the-go, either meeting with clients, managing external projects or just getting where they need to, the Surface Pro is a real game-changer.

13.5mm thick and weighing just 800g, the Surface Pro offers the mobility needed for employees whose responsibilities often have them zipping around from place to place, with a sleek, professional design that's certain to wow.

The high-resolution 30.48cm touchscreen is perfect for showing clients whatever it is that you're proud to have been a part of. When folded back into tablet mode, the screen provides the most natural writing experience on the market - with the screen size even the same as a piece of paper.

The Surface Pro has all the functionality, power and enterprise-level security of a laptop, making easy work of all the Microsoft Office apps your employees enjoy using. And thanks to Windows 10's improved wake and boot times, you can be logged in within seconds.

So, if there's any intensive work that needs to be done on-the-go, you don't have to worry about whether your device can handle it. Using the TypeCover input feels as natural as a keyboard, especially when paired with the Microsoft Office productivity suite – and there's easy connectivity to external devices if needed.

Surface Laptop and Surface Book. The new face of enterprise productivity

The Surface Laptop and Surface Book are perfect for businesses that need high-performance productivity, even on-the-go. Impressively light, thin and portable, they still pack a punch and are significantly more powerful than a MacBook Pro.

Their screens breathe new life into your visuals, thanks to high-resolution displays and true-to-life colours, so even tasks requiring a real eye for detail can be accomplished outside the office.

With access to the tools and apps your business relies on, the latest Intel® processors and all-day battery life, your Surface Laptop or Surface Book can tackle any challenge.

Surface Hub. The new face of enterprise collaboration

Does a conference call in your offices mean huddling in a group around a laptop, struggling to share your screen with a client whilst taking notes at the same time?

Then the Surface Hub is for you, with an up to 213cm touchscreen with 4k resolution and twin 1080px cameras, it's the ultimate in videoconferencing technology - powered by Skype for Business and Windows 10.

As transformational and empowering for teams, as the PC was to individuals, Surface Hub brings teams together using technology that doesn't intrude, but helps ideas flow. Creating and brainstorming as a group has never felt better or more natural, with a canvas that's as big your imagination and uses familiar apps like OneNote and Microsoft Office.

When you want to capture your work there's no need to pause the meeting or lose momentum, and sharing content is effortless whether you want to send it mid-meeting or communicate the outcomes and action points once it's over.

Centrality. With you all the way

To get the most from your investment, you need an IT solution that's designed specifically to help meet your business goals. That's why we take the time to collaborate with you and find out exactly what you need

Only then do we use our expertise and experience to develop an easy-to-use IT solution that combines Microsoft products in a way that works seamlessly with your existing IT infrastructure to deliver the results that matter to your business.

And because we know that a successful IT solution isn't just about technology, we provide dedicated Microsoft-certified support to your team throughout the development, adoption and continuous improvement of your new system.

You can be sure the recommendations we make are in your best interests because we're committed to our "zero mark-up" approach to technology, only profiting from our expertise and knowhow.
