

Windows 10

Employees that are more productive, thanks to an operating system that makes personal computing more personal.

Your employees can get more done when they're working in the ways they want. With a Centrality IT solution based on Windows 10 your team gets an experience that's perfectly tailored to however, wherever and whenever they like to work.

Choosing the right Windows 10 solution isn't as simple as just picking a product out of a catalogue. Your users' Operating System is an extremely complicated piece of software and as it'll be supporting every function of your IT infrastructure, you can't afford to get it wrong.

At Centrality, we use our expertise and experience to deploy Windows 10 in a way that not only gives your employees the best tools for their job, but also interacts seamlessly with every other aspect of your IT infrastructure. Providing the functionality, performance and security your business needs to save money and work more intelligently.

Windows 10 is designed to run on devices of every shape and size, so there's more flexibility and choice than ever when it comes to putting together your IT systems. And Centrality can help you put together the right mix of hardware, software and services, to make Windows 10 really work for you.

How does Windows 10 benefit your business?

The best tools for your business

Designed to work with the devices that best serve your business, Windows 10 brings the latest features to the equipment you already own – so there's no need to wait until your next hardware update to take advantage.

If you are ready for the latest in device innovation, Windows 10 is made to work seamlessly with the newest hardware, whether that's mouse and keyboard, touch, pen and ink, or voice. And any refinements are available almost instantaneously via the "Windows as a Service" approach.

A more consistent experience

When you sit down to work on Windows 10 everything feels familiar, even if you're using it for the first time. That's because it's built to deliver a familiar experience, whatever device you're using - with the same interface, apps, security and management system, all optimised to get more from your machine.

Whether you're working on your laptop, tablet, Surface Pro or desktop, now the best screen to work on is always the screen you have in front of you. And with Microsoft OneDrive, you're always working from the most current version of your documents.

A more productive experience

Thanks to Windows 10's improved wake and boot times, extended wait times to log in to key systems are a thing of the past, so it's no surprise that business users estimate they're taking advantage of an extra 25% of their work day that was previously unavailable.

Increased productivity isn't held-up by simple IT delays either, with end-users now granted permission to perform simple IT tasks like resetting passwords, installing software, or updating apps.

Protection from modern security threats

Security is one of the keys to running a successful business, which is why Windows 10 goes beyond simply building bigger walls. Instead, innovative new features help protect your business and its data, resulting in an average 33% reduction in security events requiring IT remediation.

New features include Device Guard to ensure only software you trust can run on your devices, Credential Guard to stop breaches from spreading beyond an infected device, and Data Execution Prevention and Windows Information Protection that separates corporate and personal files on every device.

Log-ins are better protected too, with enterprise-level security making it easier to utilise the most personal and secure ways to access Windows devices and services - including multi-factor authentication and biometrics like fingerprint, facial and iris recognition.

Continuous innovation

Managing and deploying enterprise technology has been historically inefficient but with Windows 10 you can always be up-to-date thanks to a continuous stream of innovation that's now available through the cloud - instead of physical updates to software and hardware.

Breakthroughs in security that tackle threats as they emerge are constantly patched into your system and a continuous refinement of apps and other technology can now be managed by trusted users who are granted specific permissions - without you needing to make a single click.

Cost Savings

By removing or automating many inefficient processes, Windows 10 helps lower your IT costs and administrators have noticed a 20% improvement in IT management time, with much less reliance on third-party software.

Despite these reductions in cost and energy, security management and overall administration has been greatly improved thanks to in-place deployment and more self-service functions.

Centrality. With you all the way

To get the most from your investment, you need an IT solution that's designed specifically to help meet your business goals. That's why we take the time to collaborate with you and find out exactly what you need.

Only then do we start to develop an easy-to-use IT solution that combines Microsoft products in a way that works seamlessly with your existing IT infrastructure to deliver the results that matter to your business.

And because we know that a successful IT solution isn't just about technology, we provide dedicated Microsoft-certified support to your team throughout the development, adoption and continuous improvement of your new system.

You can be sure the recommendations we make are in your best interests because we're committed to our "zero mark-up" approach to technology, meaning we only profit from our expertise and knowhow.

Contact Centrality

The enterprise IT market has numerous products and services that seemingly offer organisations easy solutions to complex problems - promising to help them save money and work more intelligently. The biggest challenge is often leveraging the right technologies, in the right combination to deliver maximum value for your business.

We use our expertise and experience to develop an easy-to-use IT solution that combines Microsoft products in a way that works seamlessly with your existing IT infrastructure, to deliver the results that matter. First time.

For obligation-free, expert advice on leveraging trusted Microsoft technology to help you get the most from your IT investment, contact Centrality today.
